ClawMetry

The Observability Layer for the AI Agent Era

Every company will run dozens of AI agents. ClawMetry gives full visibility into what they do, what they cost, and whether they work. One install. Any framework. Non-technical friendly.

THE OPPORTUNITY

Every company will manage dozens of AI agents. Who monitors them?

The Claw ecosystem alone has 375k+ combined GitHub stars. NVIDIA built NemoClaw. And this is just the beginning. Within 12 months, every company will run 10-100 AI agents across multiple frameworks. The ones who manage them best will deliver the most value.

326k	NVIDIA	24k	25k
OpenClaw stars	NemoClaw (enterprise)	NanoClaw stars	PicoClaw stars

This is just the Claw ecosystem. Add Claude Code, Cursor, custom enterprise agents, and the TAM explodes. AI agent observability is a new infrastructure category, not a tool for one framework.

THE PROBLEM

When you have 10-50 agents running, you are blind

Today, people build AI agents and run evals to check if they work. That is fine for one agent. But when you have tens or hundreds of AI agents doing a lot of things across your company, you need to know what they are doing, what they cost, and whether they are actually working. Nobody can answer these questions today. The problem gets worse with every agent you add.

Zero visibility at scale

One agent is manageable. Ten agents across three frameworks? Nobody knows what is happening.

Cost chaos multiplies

Each agent calls different models. Token spend is opaque. Bills arrive as surprises, not insights.

No unified audit trail

Compliance teams cannot approve agents they cannot audit. Every framework logs differently (or not at all).

Fragmented tooling

No cross-framework view exists. Each agent is a silo. Traditional APMs see HTTP requests, not reasoning.

THE SOLUTION

Install ClawMetry. See everything. Any framework.

ClawMetry auto-detects your AI agent setup and gives full observability. One install, works everywhere. Seven deep tabs covering flows, reasoning, costs, memory, sub-agents, crons, and fleet overview. Open source locally,

E2E encrypted cloud for access from anywhere. Simple enough for a non-technical person to use.

⚡ **Auto-detect any agent setup**

Install ClawMetry and it understands whatever AI agent framework you are running. No configuration needed.

🌐 **Unified dashboard across frameworks**

One view for all your agents. OpenClaw, NemoClaw, NanoClaw, PicoClaw, or custom agents. All in one place.

💰 **Per-session cost attribution**

Know exactly what each agent costs, per model, per session, per sub-agent. Before the bill arrives.

🔒 **E2E encrypted cloud sync**

AES-256-GCM encryption on your machine before upload. Access from any device. Zero-knowledge architecture.

TRACTION

75,000 installs. Zero marketing spend.

75k+
Total installs in 4 weeks. 100% organic.

100+
Countries with active installations

133
Cloud users, 19 connected nodes

This is just OpenClaw users. Each new framework integration unlocks an entirely new user base with the same organic growth dynamics.

PLATFORM ROADMAP

From one framework to universal agent observability

LIVE NOW

OpenClaw

326k stars. Deep integration. 75k+ installs. Cloud

IN PROGRESS

NemoClaw (NVIDIA)

Enterprise agent framework by NVIDIA. Integration

Q3 2026

NanoClaw + PicoClaw

24k + 25k stars. Similar architecture. Plugin development

launched. Product-market fit proven.

underway. Unlocks enterprise segment.

estimated at 4-6 weeks each.

Q4 2026

Any Agent Framework

Plugin SDK public. Claude Code, Cursor, custom agents. Community-contributed integrations.

2027

Auto-Detect Any Setup

Install ClawMetry, it scans your environment, detects all agents, configures itself. Zero-config universal observability.

Revenue multiplier: Each new framework doubles the addressable market. OpenClaw alone = $50M SAM. All Claw frameworks = $200M+. All agent frameworks = $1B+.

BUSINESS MODEL

$5/node/month. More agents = more revenue per customer.

Any agent framework → pip install clawmetry →

Full local dashboard → **$5/node/mo cloud**

🌱 ☁️ 🏢

Free: Full Local Dashboard

All 7 tabs, all features, forever free. Open source flywheel drives organic installs and word of mouth.

Pro: $5/node/month

Cloud sync, multi-device access, fleet view. As companies add more agents, they add more nodes. Revenue grows with adoption.

Enterprise (2027)

SSO, compliance, audit exports, multi-team, cross-framework fleet management. Custom pricing per org.

Built-in expansion revenue: A customer starts with 1 node on OpenClaw. They add NemoClaw agents (2 more nodes). Then PicoClaw (2 more). Same customer goes from $5/mo to $25/mo without any upsell. More agents = more revenue. Automatically.

MARKET

AI agent management is a $12B+ market by 2028

TOTAL ADDRESSABLE MARKET

$12B+

AI agent observability and management by 2028, growing 40%+ YoY. Every company

SERVICEABLE ADDRESSABLE MARKET

$500M+

Claw ecosystem (375k+ stars) + proprietary agents (Claude Code, Cursor, enterprise). Multi-

running agents needs this. TAM is all agent users, not just OpenClaw.

framework reach within 18 months.

Why now?

🚀 **Agent proliferation is accelerating.** Every company will manage 10-100 AI agents within 12 months. The ones with visibility will outperform.

📈 **No cross-framework solution exists.** ClawMetry is first to market with a universal approach. Starting with the largest ecosystem (OpenClaw, 326k stars).

🏆 **The Datadog playbook.** Datadog started with AWS monitoring, expanded to every cloud, now worth $50B. ClawMetry starts with OpenClaw, expands to every agent framework.

FOUNDER

He manages 15,000 agent systems daily. He lives this problem.

Vivek Chand

Founder & CEO, ClawMetry

13 years building products that make complex systems work for real

Lives the multi-agent problem

Manages AI agent systems at Booking.com scale daily. Knows

people. 3rd engineer at RecruiterBox (built it to acquisition). Led product engineering at ClassKlap, scaling personalized education across Indian classrooms. Now Tech Lead at Booking.com leading customer support AI for millions of travelers.

ClawMetry was born January 28, 2026. Installed OpenClaw, hit the visibility wall within a week, and asked the agent itself to help build a dashboard. What started as a weekend project became 80k+ downloads in weeks.

Based in Amsterdam. Ships daily. Builds with the community.75k installs solo, zero marketing. Based in Amsterdam.

firsthand what breaks when you run agents without visibility.

: ClassKlap

Built an edtech platform used by 500k+ students. Successfully acquired. Proven ability to build, scale, and exit.

Capital efficient builder

Built the entire product solo in 4 weeks: Python SDK, React dashboard, GCP infra, E2E encryption, Stripe billing. $0 external cost.

USE OF FUNDS

$750k to build the universal agent observability platform

Product & Multi-Framework Engineering — **45%**
Second engineer, NemoClaw/NanoClaw/PicoClaw integrations, plugin SDK, auto-detection engine, mobile app

Go-to-Market & Partnerships — **25%**
Framework partnerships, developer relations, cross-community presence, enterprise pilots

Infrastructure — **15%**
GCP scaling, multi-region deployment, SOC2 compliance, security audit

Operations & Runway — **15%**
18 months runway, legal (EU entity), accounting, tooling

18-month milestones: 4+ framework integrations live, 500 paying cloud customers, $83k+ MRR ($1M ARR run rate), plugin SDK public, enterprise pilot with 5 design partners

THE ASK

$750k

Pre-seed

18 months to $1M ARR. The install base is already there. The multi-framework expansion is the multiplier. Every company running AI agents will need ClawMetry.

75k+	$12B+	$1M
Installs (4 weeks)	TAM by 2028	ARR target
